“mobileOK in Korea”

Moderated by

Seungyun Lee / ETRI, MW2 Forum MobileOK TF Chair

Daniel K. Appelquist / Vodafone, W3C BP WG Chair

Goal

- To share the information and situation on mobile web standardization and deployment
- To make a consensus and better understanding each other
- To see the future perspective for mobileOK

Ice Breaking

mobileOK in Korea

- Basically, we believe mobileOK could make sure seamless web access in mobile environment.
- We are now developing the standards in mobile web align with W3C MWI activities.
- We are now preparing a trial service for mobileOK in order to make sure well-deployment of mobile web standard in the market.
- We finally aim at “*everythingOK*” or “*ubiquitousOK*” over the mobileOK.

Questions from the W3C

1. Meaning and Necessity of "mobileOK in Korea" standard?
2. Fragmentation of mobileOK standards (country/region)
 - Necessity of Korean profile
 - Solution for supporting of local variation (not to create another mobileOK)
 - How to synchronize with master standard (W3C mobileOK)
 - **MobileOK checker code library** [*Sub-point: would such a code library be useful in the Korean market?*]

Questions from Korea

1. Application Issue (e.g., AJAX)
2. DDC/ADC issue
3. Device & Profile issue
4. mobileOK Certification issue
5. Mobile Web vs. HTML5
6. Other
 - Benefit of mobileOK standards in the market
 - Expectation from Korea in W3C MWI standardization
